PART 1

Original Plots

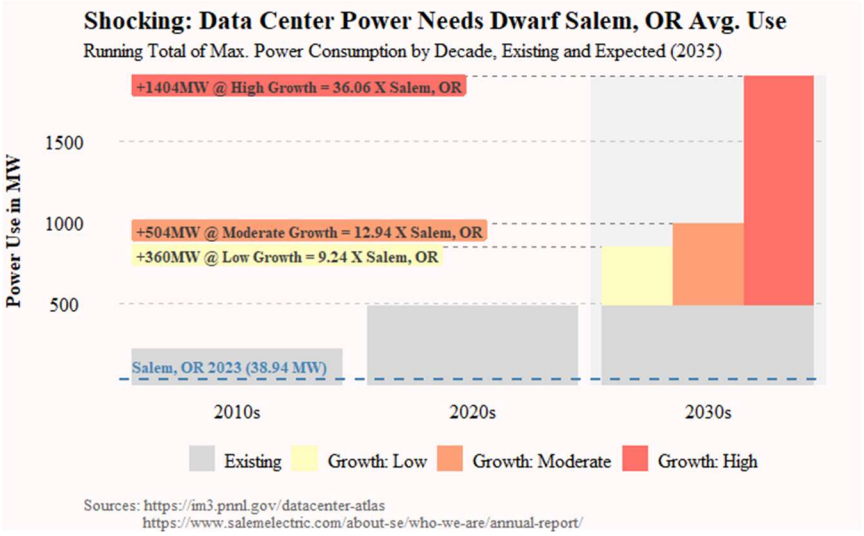

Final Plot

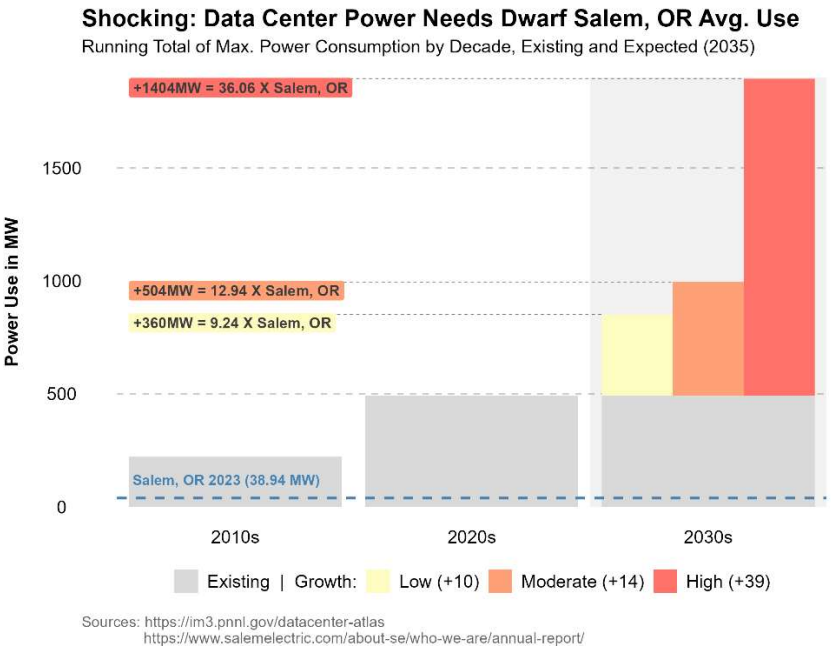

Peer feedback asked to include individual city labels, more map detail and less distracting background. I transitioned from a plotly graphic to a leaflet graphic and scrapped the two model approach since leaflet allowed me to accomplish all the desired changes.

Original Plot

Final Plot

Peer feedback suggested the labels were overcrowded, it contained too much data, and the off-white background was distracting. Another comment suggested highlighted labels made for additional cognitive burden. Yet another person said this was confusing.

In the final iteration, I cleaned up the labels and changed the font. The font was Aiyana's idea and I think it was a great as comparing the two, the more rounded, larger letters make this easier to read. I also cleaned up the legend text and added the number of data centers in each growth scenario. It has a high info to ink ratio still… but I like it.
